Additional file 4. Comparison of internalin AB region. Schematic representation of the internalin AB region. Gray arrows indicate conserved genes adjacent to the region; red arrows indicate inlA; green arrows indicate inlB; blue arrows indicate homologues of wapA, which encodes a wall associated protein; and magenta arrows indicate homologues of lmo435, which encodes a putative peptidoglycan bound protein. White arrows indicate ORFs that are found adjacent to surface proteins. ORFs marked with an asterisk have been identified as putative alien genes introduced in the genome by HGT.
