The diagram illustrates the percentage of transcripts at various bootstrap support levels. It shows the distribution of VGT (dark bars) and HGT (light bars) across different bootstrap support values (50, 60, 70, 80, 90, 100).

- **VGT (Viral Genome Transcripts)**:
  - 50% support: Significant percentage
  - 60% support: Medium percentage
  - 70% support: Low percentage
  - 80% support: Very low percentage
  - 90% support: Almost negligible
  - 100% support: Not shown

- **HGT (Horizontal Gene Transfers)**: Similar distribution as VGT, but generally lower percentages at all support levels.

The y-axis represents the percentage of transcripts, while the x-axis shows the bootstrap support levels.
