The graph shows the temperature change over time for two conditions: warm-24 hour autolysis and cold-24 hour autolysis.

- The temperature starts at 37°C and decreases over time for both conditions.
- The warm-24 hour autolysis line is red and remains constant at 22°C after 12 hours.
- The cold-24 hour autolysis line is blue and decreases more steeply over time, reaching approximately 0°C by 24 hours.

The x-axis represents time in hours, ranging from 0 to 24, while the y-axis represents temperature in °C, ranging from 0 to 37.
