The image shows a series of diagrams labeled A to G. Each diagram contains circles representing different conditions, and numbers in parentheses likely indicate specific data points or values associated with those conditions. The diagrams depict experimental results possibly related to gene expression or protein levels, with terms like "downregulation" and "upregulation" mentioned. The numbers within the circles and adjacent text suggest comparisons between different treatments or conditions, such as "BMP2 6 h" and "TSA 24 h." The exact context or experiment setup is not clear from the image alone.
