Confirmation of Chromatin and Antibody by qPCR. Binding of LRH-1 to promoters of 4 known LRH-1 target genes (Chong HK, Infante AM, Seo YK, Jeon TI, Zhang Y, Edwards PA, Xie X, Osborne TF: Genome-wide interrogation of hepatic FXR reveals an asymmetric IR-1 motif and synergy with LRH-1. *Nucleic Acids Res* 2010, 38(18):6007-6017) in liver chromatin was quantified after precipitation of chromatin with an antibody to LRH-1. Chromatin from WT mouse liver was precipitated with either a control antibody fraction (IgG) or an LRH-1 antibody (LRH-1) as indicated.
