Additional Figure 3: Courtship analysis of males over-expressing Fru\textsuperscript{MA,B or C}.

Courtship index (A-B) and wing extension index (C-D) for male-female (A and C) and male-male (B and D) courtship behavior of corresponding experimental or control males (grey and white boxes, respectively). Males over-expressing Fru\textsuperscript{MA}, Fru\textsuperscript{MB}, or Fru\textsuperscript{MC} in fru\textsuperscript{P1}-expressing neurons (grey filled purple, pink or cyan), single transgene Fru\textsuperscript{MA}, Fru\textsuperscript{MB}, or Fru\textsuperscript{MC} males (white filled purple, pink, or cyan), UAS-GAL4/+; fru\textsuperscript{P1}-GAL4/+ single transgene males, and Canton S males (no transgenes indicated) are indicated. Dashed grey box indicates statistically significant difference of experimental males from all three controls (Canton S, UAS-GAL4/+;fru\textsuperscript{P1}-GAL4/+ and respective Fru\textsuperscript{MA,B or C} single transgene males) at p-value < 0.05 (Wilcoxon rank sum test, two sided). Median is indicated by horizontal line in box, boxes cover 25th to 75th percentiles of the samples, whiskers represent data not considered an outlier, and outliers are defined as values greater than or less than 1.5 times the interquartile range (red cross).
