Additional File 8. Locomotive behaviour on solid medium is mostly unaffected by disruption of some palmitoylation enzymes. Locomotion was assessed on solid medium for available mutants of DHHC (A) and PPT (B) enzymes and by feeding RNAi in hypersensitive rrf-3 strain for a subset of enzymes (C). n = 30-84, 3-12 experiments (mutants) or 5-10, 1 experiment (RNAi). * p < 0.05 by one-way ANOVA.
