Figure 4

The image shows a bar chart representing the taxonomic composition of various bacterial groups across different patients. The chart includes categories such as Nostocales, Fungi, Kinetoplastida, delta/epsilon subdivisions, Florideophyceae, Streptophyta, Chlorophyta, Alphaproteobacteria, Herpesviridae, Bacteroidetes, Betaproteobacteria, Bacilli, Gammaproteobacteria, Mastadenovirus, and Actinobacteria. Each patient is represented by a bar that is divided into segments corresponding to these bacterial groups, indicating their relative abundance.
