Figure S3

Count of ceRNA pairs vs. miRP level

The histogram shows the distribution of ceRNA pairs across different miRP levels. The y-axis represents the count of ceRNA pairs, while the x-axis represents the miRP level. The data is presented on a logarithmic scale, with the y-axis showing counts in $10^6$. The peak of the distribution is around miRP level 6, indicating a higher count of ceRNA pairs at this level.
