25 Most Frequent Biological Process GO Terms

- protein modification
- microtubule-based movement
- G-protein coupled receptor protein
- ER to Golgi vesicle-mediated transport
- cellular physiological process
- signal transduction
- microtubule cytoskeleton organization and biogenesis
- chromosome segregation
- protein folding
- proteolysis
- mitosis
- nuclear mRNA splicing, via
- microtubule-based process
- establishment and/or maintenance of chromatin architecture
- cytoskeleton organization and biogenesis
- ubiquitin-dependent protein
- small GTPase mediated
- regulation of progression through mitotic cell cycle
- protein transport
- regulation of transcription, DNA-
- transport
- protein biosynthesis
- intracellular protein transport
- unknown
- mitosis
- proteolysis
- protein folding
- ER to Golgi vesicle-mediated transport
