Determination of IL-17 levels in different biological fluids (NL, BAL, Serum) after treatment with LcV, LcM, PppA, PppA+LcV, PppA+LcM over time (0 d, 28 d, 42 d, 58 d, 73 d).

- **NL**: Significant differences (*, **, ***). The levels of IL-17 are higher in PppA+LcM compared to other treatment groups.
- **BAL**: Similar pattern as NL, with significant differences (*, **). PppA+LcM shows the highest IL-17 levels.
- **Serum**: Moderate IL-17 levels, with no significant differences observed.

*Control* refers to the untreated group, while *LcV*, *LcM*, *PppA*, *PppA+LcV*, and *PppA+LcM* represent the treated groups.
