The diagram shows the variation of PAR (400-700nm) and UV radiation from 06:00 to 18:00. PAR radiation peaks around 12:00, while UV radiation peaks around 11:00. The UV radiation is further broken down into UV-A (320-400nm) and UV-B (280-320nm) components, with UV-B contributing to a smaller extent than UV-A.
