Primordial *Enterococcus faecium*

1. Early Community *E. faecium* (with PBP5-R)
2. Early Community *E. faecium* (with PBP5-S)

- **Hospital-Associated Clade**
  - Includes ampicillin resistant community derived isolates such as those from some canine and feline origins

- **Community-Associated Clade**
  - Contains most of the clinical, hospital-associated, and outbreak isolates e.g., those containing *ecbA* (fms18), *fms11-19-16*, IS16, etc.
  - e.g., healthy volunteers, fecal samples, insect isolates, environmental isolates
