The graph shows the percentage of survival for three different strains: K12, SE, and ST. The x-axis represents the strains, and the y-axis represents the percentage of survival. Three different concentrations are tested: 0 µM, 10 µM, and 100 µM. The bars are shaded and have error bars. Significant differences are indicated by asterisks: * for 0 µM compared to 10 µM and ** for 0 µM compared to 100 µM.
