The graph shows the resistivity of C. coli and C. jejuni to various antimicrobials. "AMP" indicates ampicillin, "CIP" indicates ciprofloxacin, "E" indicates erythromycin, "NAL*" indicates nalidixic acid, "T*" indicates tetracycline, "GEN" indicates gentamicin, "COT" indicates cotrimoxazole, and "CL" indicates chloramphenicol. The y-axis represents the resistivity percentage, and the x-axis represents different antimicrobials.
