Fig. 5

![Graph showing survival rate (%) over post-injection hours for different treatments. The x-axis represents the post-injection hour (24 h, 36 h, 48 h, 60 h, 204 h), and the y-axis represents the survival rate (%). The graph compares no injection, dsGFP, dsHex, and dsSP1 treatments. Notations 'a', 'b', and 'c' indicate statistically significant differences among the treatments at different time points.](image-url)
