A cartoon shows a bar graph with relative MIR155HG/5S expression. The x-axis labels include Ramos, Daudi, SUDHL4, Pfeiffer, BL41, BJAB, IB4, KMH2, and L428. The y-axis is labeled "Relative MIR155HG/5S Expression." The bars for KMH2 and L428 are significantly higher than those for the other cell lines, indicating a higher expression level. A dashed line with "p < 0.05" indicates statistical significance.

B shows a gel blot analysis with bands for p65, c-Rel, and PARP. The blots show varying intensities of protein expression across the cell lines.
