The graph shows the transglutaminase activity (percent control) for different conditions:

- **Con**
- **8-Cl-Ado**
- **D₃**
- **D₃ + 8-Cl-Ado**

The activity is compared to the control group (Con). The results indicate that **D₃** and **D₃ + 8-Cl-Ado** show increased activity compared to the control and 8-Cl-Ado conditions, with significant differences indicated by the asterisks (*) above the bars.
