The diagram shows the fold change of AtNUDT6, AtNUDT7, and AtNUDT2 under two different conditions: Col-MM and Col-12:3:1. The y-axis represents the fold change, while the x-axis lists the three genes. The bars indicate the mean fold change with error bars representing the standard deviation. The letters a and b are used to denote statistically significant differences between the conditions for each gene. The image also includes a inset showing a gel with bands labeled Col-12:3:1 and Col-MM.
