Supplemental Figure 2

The figure shows a bar graph with the y-axis labeled as Log (CFU/mL/g FW). The x-axis represents different genotypes: Col-0, ndr1-1, T3-1, T3-2, and T3-3. The graph compares three time points: T0, 2dpi, and 4dpi.

- Col-0: Log values are consistent across T0, 2dpi, and 4dpi.
- ndr1-1: Log values increase from T0 to 2dpi, then decrease to 4dpi.
- T3-1: Log values decrease from T0 to 2dpi, then increase to 4dpi.
- T3-2: Log values decrease from T0 to 2dpi, then remain constant at 4dpi.
- T3-3: Log values decrease from T0 to 2dpi, then remain constant at 4dpi.

The bars are accompanied by error bars indicating variability.
