Figure 4: Flavanol concentration in fruit skin (light grey) and cortex (dark grey) of seven commercial apple cultivars compared to quince, crab apple and two seedlings from the ‘Royal Gala’ x ‘Braeburn’ segregating population. The ‘Royal Gala’ x ‘Braeburn’ seedlings are shown with their LAR1 genotype as in Figure 3. A: catechin, B: procyanidin-B2, C: epicatechin and D: procyanidin oligomers. The concentrations are given in µg/g of fresh weight.
