The graph shows the concentration of DMSP (DMSP g$^{-1}$) over time for three different species:

- **L. kotschyanum topside** (solid line with black circles)
- **L. kotschyanum underside** (dotted line with white circles)
- **Porolithon sp.** (dashed line with black triangles)

The x-axis represents the time of day (hours) ranging from 6 to 20, while the y-axis shows the concentration of DMSP from 0 to 1800 μmol g$^{-1}$. The graph indicates fluctuations and differences in DMSP concentration among the three species throughout the day.
