The graph represents the percentage of sequences across different ranges and treatments. The x-axis displays the number of sequences, while the y-axis shows the percentage. The treatments include common in all, control only, CO₂ only, CO₂+drought only, and drought only. The categories for the x-axis are divided into different ranges: <50, 50-500, 500-5000, and >5000. The bars indicate the original, tpm >0.8, and tpm >0.8; score >40; w/o “no hits” categories.
