**Baseline (T0)**
GP practitioners (N = 40), Patients with arterial hypertension (N = 1800)
Data assessment
Clinical data, socio-demographic data, patient questionnaires (1-6), prescription data

**Exclusion**
N = 600 normotensive blood pressure and absence of relevant comorbid disorder

**Remaining in the study**
N = 1200 hypertensive blood pressure and / or relevant comorbid disorder

**Cluster Randomisation**

**Intervention group**
N = 20 GP; N = 600 patients

Intervention:
Adapted SDM-Training, + Patient information

**Follow-up assessments**
(T1, T2, T3)
Clinical data
Patient questionnaires (2, 5 - 9)
Prescription data
T3 (N = 394)

**Control group**
N = 20 GP, N = 600 patients

**Follow-up assessments**
(T1, T2, T3)
Clinical data,
Patient questionnaires (2, 5 - 9)
Prescription data
T3 (N = 394)
