### Management of Pain and Agitation: Mechanical Ventilation Anticipated For Less Than or Equal to 48 Hours

Orders apply to adult patients in intensive care units (15 years of age and older). Mark the ☐ for desired orders. If ☐ are blank, order is inactive. All pre-printed doses are based on normal renal and hepatic function and must be assessed for adjustment against the individual patient’s renal and hepatic function and for interactions with other medications.

**Allergy module reviewed. □ No additional allergies identified, or □ Additional allergies identified and MICS Allergy updated, or □ Additional allergies. List (include reaction): ____________________________ please update MICS Allergies.**

---

**ALERT**

This order set does not apply to patients receiving neuromuscular blocking agents nor to patients receiving noninvasive mechanical ventilation.

In patients with endotracheal intubation and mechanical ventilation anticipated for greater than 48 hours, consider using order set MC1156-406 “ICU Management of Pain and Agitation in Patients with Endotracheal Intubation and Mechanical Ventilation Anticipated for Greater than 48 Hours”.

### MEDICATIONS:

1. **Pain:** Choose A or B.

#### A. Mean Arterial Pressure greater than 70 mmHg.

- **Morphine (Duramorph™) IV**
  1. If pain greater than or equal to 4, give loading dose of □ mg. Repeat dose of mg every 5 minutes for pain greater than or equal to 4 (maximum 30 mg in any one hour).  
     (2 – 5 mg)
  2. If pain greater than or equal to 4 after 5 total doses in any one hour, begin continuous infusion at mg per hour.  
     (2 – 10 mg)
     Repeat dose of mg every 5 minutes for pain greater than or equal to 4 (maximum 30 mg in any one hour).
  3. If pain greater than or equal to 4 after 5 total doses in any one hour after continuous infusion, increase continuous infusion by 1 mg per hour every hour until pain rating less than 4 (maximum 15 mg per hour).

#### B. Mean Arterial Pressure less than 70 mmHg, or if allergic to Morphine (Duramorph™):

- **Fentanyl (Sublimaze®) IV**
  1. If pain greater than or equal to 4, give loading dose of □ mcg. Repeat dose of mcg every 5 minutes for pain greater than or equal to 4 (maximum 600 mcg in any one hour).  
     (25 – 50 mcg)
  2. If pain greater than or equal to 4 after 5 total doses in any one hour, begin continuous infusion at □ mcg per hour.  
     (25 – 100 mcg)
     Repeat dose of □ mcg every 5 minutes for pain greater than or equal to 4 (maximum 600 mcg in any one hour).
  3. If pain greater than or equal to 4 after 5 total doses in any one hour after continuous infusion, increase continuous infusion by 25 mcg per hour every hour until pain rating less than 4 (maximum 300 mcg per hour).

#### Other

2. **Agitation (if pain rating less than 4): Choose A or B.**

#### A. Mean Arterial Pressure greater than 70 mmHg (choose a or b):

- **Propofol (Diprivan®) IV**
  1. If RASS score greater than or equal to +1, give loading dose of □ mg and begin continuous infusion at □ mcg/kg per minute.  
     (0.3 mg/kg) (5 – 80 mcg/kg)
     Increase by 5 mcg/kg per minute until RASS score equal to 0 (maximum 80 mcg/kg per minute).
  2. Other

- **Midazolam (Versed®) IV**
  1. If RASS score greater than or equal to +1, give loading dose of □ mg. Repeat dose of □ mg every 5 minutes if RASS score greater than or equal to +1 (maximum 40 mg in any one hour).  
     (1 – 4 mg)
     (1 – 4 mg)
  2. If RASS score greater than or equal to +1 after 5 total doses in any one hour, begin continuous infusion at □ mg per hour.  
     (1 – 4 mg)
     Repeat dose of □ mg every 5 minutes if RASS score greater than or equal to +1 (maximum 40 mg in any one hour).
  3. If RASS score greater than or equal to +1 after 5 total doses in any one hour after continuous infusion, increase continuous infusion by 1 mg per hour every hour until RASS score equal to 0 (maximum 20 mg per hour).

#### B. Mean Arterial Pressure less than 70 mmHg, or if allergic to Propofol (Diprivan®) or eggs:

- **Midazolam (Versed®) IV**
  1. If RASS score greater than or equal to +1, give loading dose of □ mg. Repeat dose of □ mg every 5 minutes if RASS score greater than or equal to +1 (maximum 40 mg in any one hour).  
     (1 – 4 mg)
     (1 – 4 mg)
  2. If RASS score greater than or equal to +1 after 5 total doses in any one hour, begin continuous infusion at □ mg per hour.  
     (1 – 4 mg)
     Repeat dose of □ mg every 5 minutes if RASS score greater than or equal to +1 (maximum 40 mg in any one hour).
  3. If RASS score greater than or equal to +1 after 5 total doses in any one hour after continuous infusion, increase continuous infusion by 1 mg per hour every hour until RASS score equal to 0 (maximum 20 mg per hour).

#### Other

3. **X** This order set is to be discontinued once the patient is extubated and no longer receiving mechanical ventilation.

Procedure for RASS assessment

1. Observe patient
   - Patient is alert, restless, or agitated. Score 0 to +4

2. If not alert, state patient’s name and say to open eyes and look at speaker.
   - Patient awakens with sustained eye opening and eye contact. Score -1
   - Patient awakens with eye opening and eye contact, but not sustained. Score -2
   - Patient has any movement in response to voice but no eye contact. Score -3

3. When no response to verbal stimulation, physically stimulate patient by shaking shoulder and/or rubbing sternum.
   - Patient has any movement to physical stimulation. Score -4
   - Patient has no response to any stimulation. Score -5
