Survivors listed on registry who potentially met eligibility criteria \( n=468 \)

- Registry contacted the cancer survivor’s clinician to gain consent for researchers to approach the patient
  - Clinician reported survivors ineligible \( n=57 \)
  - Unable to contact clinician \( n=134 \) (33% of all potentially eligible survivors)
  - Clinician did not provide consent \( n=45 \) (11% of all potentially eligible survivors)
  - All potentially eligible survivors \( n=411 \)
  - Clinician provided consent to contact \( n=232 \) (56% of all potentially eligible survivors)

Stage 1.

- Clinician provided consent to contact cancer survivor

Stage 2.

- Cancer survivor consented to pass on contact details to researchers
  - Registry contacted the cancer survivor to gain consent for researchers to approach them
  - Survivor provided consent to contact \( n=64 \) (28% of those with clinician consent) (16% of all potentially eligible survivors)

Stage 3.

- Cancer survivor consented to participate in study
  - Researchers contacted the cancer survivor to gain consent to participate in research
  - Survivor returned questionnaire \( n=32 \) (50% of those who agreed to be contacted) (7.8% of all potentially eligible survivors)
  - Researchers included the survivor’s data in the research study

- Unable to contact cancer survivor \( n=150 \) (65% of those with clinician consent) (36% of all potentially eligible survivors)
  - Survivor did not return consent form \( n=18 \) (7.8% of those with clinician consent) (4.3% of all potentially eligible survivors)

- Survivor did not return questionnaire \( n=20 \) (31% of those who agreed to be contacted) (4.9% of all potentially eligible survivors)

- Survivor returned questionnaire \( n=32 \) (50% of those who agreed to be contacted) (7.8% of all potentially eligible survivors)
