Figure 1. Trend in use of the possessive form i.e., “Down’s syndrome” in PubMed archives since 1970. Percentage is calculated using a formula, $100X/(X+Y)$, where $X$ and $Y$ indicated the total number of articles retrieved by text-word search “Down’s syndrome” and “Down syndrome,” respectively. Over the last 20 years, this frequency is approximately halved (33.7% versus 16.5%; $p<0.001$).
