Total number of clinics assessed for eligibility
n=34

Excluded = 14
- Unable to set up CDM team = 11
- Refused to participate = 3

Total number of clinics eligible to participate
n=20
Clinics were matched according to their geographical locations, staffing and workload into 10 pairs

Random sampling using computer generated table to select 5 pairs
n=10

Random allocation using computer generated table

Intervention arm
n=5

Control arm
n=5

An average of 84 consecutive T2DM patients who fulfilled the inclusion and exclusion criteria were recruited from each clinic over a 2-week recruitment period
An average of 58 consecutive HPT patients without T2DM who fulfilled the inclusion and exclusion criteria were recruited from each clinic over a 2-week recruitment period

Intervention arm
Target sample of T2DM patients, n=418
Target sample of HPT patients without T2DM, n=292

Control arm
Target sample of T2DM patients, n=418
Target sample of HPT patients without T2DM, n=292
