**Study Title**

- Inferior vena cava pressure vs. Intragastric pressure

**Graph Details**

- **Y-axis**: Inferior vena cava pressure (mm Hg)
- **X-axis**: Intragastric pressure (mm Hg)
- **Correlation Coefficient**: r = 0.627, p = 0.01

**Graph Description**

A scatter plot showing the relationship between inferior vena cava pressure and intragastric pressure, with a linear trend line indicating a positive correlation. The correlation coefficient is 0.627, and the p-value is 0.01, suggesting a statistically significant relationship.
