Study population
N = 538

Fecal calprotectin < 50μg/g
N = 359 (67%)

- Significant lesion
  N = 57 (16%)
- No significant lesion
  N = 302 (84%)

Fecal calprotectin ≥ 50μg/g
N = 179 (33%)

- Significant lesion
  N = 155 (87%)
- No significant lesion
  N = 24 (13%)

Fecal calprotectin < 10μg/g
N = 178 (33%)

- Significant lesion
  N = 13 (7.3%)
- No significant lesion
  N = 165 (93%)

Fecal calprotectin ≥ 10μg/g
N = 360 (67%)

- Significant lesion
  N = 199 (55%)
- No significant lesion
  N = 161 (45%)
