Normal tissue

a. surface epithelium

Strong nuclear (arrows) and cytoplasmic positivity (arrow heads)

C. crypts

Nuclear (arrows) and cytoplasmic positivity (arrow heads)

e. lamina propria

Scattered positive nuclei (arrows)

UC tissue

b. surface epithelium

The surface epithelium retains nuclear and weak cytoplasmic positivity (arrows)

d. crypts

Crypts with positive cytoplasm and focal nuclear positivity (arrows) with active cryptitis and positive neutrophils (arrow heads)

f. lamina propria

Crypts with negative nuclei (arrow), positive cytoplasm (arrow head) and positive neutrophils (arrow heads)
