Figure 1: Inpatient centred rehabilitation model of care targeting patients with CI

Factors influencing outcomes

Patient Characteristics
- Delirium
- Cognition
- Pre-fracture functional and cognitive status
- Sex
- Age
- Level of education
- Co-morbidities
- Social Support

HCP Characteristics
- Experience
- Age
- Sex
- Level of education

Determinants of Research Utilization (RU)

Context
- Culture
- Leadership
- Evaluation

Facilitation
- Enable others

Evidence
- Best information available
- Patient preference
- Staff experience

Processes

Implementation of the new model of care
- Treatment fidelity checks

HCP Outcomes

Improved Health Care Professional Outcomes
- Attitudes
- Knowledge
- Satisfaction
- Stress

Patient

Improved Patient Outcomes
- Mobility
- Function
- Living Situation
