Baseline Measurement (T1) (Target N = 120 residents)

Follow-up Measurement after 6 months (T2)

Follow-up Measurement after 12 months (T3) (Target N = 84 residents)

Selection of residents, based on eligibility criteria (i.e. primary diagnosis of dementia and minimum of 4 weeks of residence prior to data collection)

Inclusion of small scale living facilities (N = 28 units in 5 facilities, response 100%)

Screening of all residents

Inclusion of psychogeriatric wards in traditional nursing homes (N = 21 wards in 7 nursing homes, response 64%)

Selection of residents, based on eligibility and matching criteria (i.e. Cognition/ADL profile)

Selection traditional nursing homes: N = 12

Baseline Measurement (T1) (Target N = 140 residents)

Follow-up Measurement after 6 months (T2)

Follow-up Measurement after 12 months (T3) (Target N = 84 residents)

1 home is excluded due to not meeting inclusion criteria 4 homes did not want to participate

Selection small-scale living facilities: N = 5

Inclusion of small scale living facilities (N = 28 units in 5 facilities, response 100%)

Selection of residents: N = 12

Selection small-scale living facilities: N = 5

Inclusion of small scale living facilities (N = 28 units in 5 facilities, response 100%)

Screening of all residents

Selection of residents, based on eligibility criteria (i.e. primary diagnosis of dementia and minimum of 4 weeks of residence prior to data collection)
