The graph shows the number of tests and percent positive for different age groups and specimen sites. It includes ages <16, 16-19, 20-24, 25-29, 30-39, and 40+. The specimen sites are urine, rectal, throat, urethral, eye, and other/missing. Each age group has a red bar representing the number of tests and a blue line indicating the percent positive. The x-axis represents the age group and specimen site, while the y-axes show the number of tests and percent positive.
