247 NB with suspected congenital toxoplasmosis

148 NB

(non-PCR methods used for the diagnosis of congenital toxoplasmosis, such as mouse inoculation)

excluded

68 NB included

(mother treated with spiramycin)

44 NB

(mother not treated with spiramycin)

99 NB

(PCR, specific anti- T. gondii IgA, IgG and IgM)

31 NB excluded

(The NB were excluded because the diagnosis of toxoplasmosis was not completed due to lack of clinical and laboratory monitoring)
