Figure 1

The figure shows the cumulative survival rate (%) over time (months) for different stages of AKI. The survival rates are as follows:

- No AKI: Highest survival rate.
- Stage 1: Moderate survival rate.
- Stage 2: Lower survival rate.
- Stage 3: Lowest survival rate.

As time increases, the survival rate decreases for all stages, with the no AKI group having the highest survival rate throughout the time period.
