FIGURE 2

The graph illustrates the change in PTH (percentage of pre-dose) over time (in hours) for different treatments: AMG 416, cinacalcet, and saline. The y-axis represents PTH (% of Pre-Dose) ranging from 0 to 200, and the x-axis represents time (in hours) ranging from 0 to 25. The graph shows a significant increase in PTH for the saline group compared to the other treatments at 25 hours.
