The graph shows the number of weeks of breastfeeding among mothers with different levels of maternal education. The x-axis represents different levels of maternal education: Primary, Compulsory Secondary, Upper Secondary, University Degree, and Post-graduate Degree. The y-axis represents the number of weeks of breastfeeding. A trend line indicates that mothers with higher levels of education tend to breastfeed for longer periods. The statistical significance of the difference is noted as *p < .001* for any breastfeeding and *p < .01* for exclusive breastfeeding.
