The graph shows the cell number (X 10^5) over time (h) for different treatments:
- **DMSO**
- **IGF-1 (10 nM)**
- **IGF-1 + Resveratrol**
- **Resveratrol (150 µM)**

The y-axis represents the cell number (X 10^5), and the x-axis represents the time (h) ranging from 0 to 72 hours. The data points are marked with different symbols and error bars indicating variability. The graph illustrates the growth patterns of cells under different conditions over time.
