Fig. 5

[Graph showing luciferase activity relative to vector alone for different conditions: AR prom + 5'UTR WT, AR prom + 5'UTR MUT, S140 prom + AR 5'UTR WT, S140 prom + AR 5'UTR MUT. The x-axis represents the different conditions, and the y-axis shows luciferase activity. Two bars represent MCF7 and T47D. The figure indicates significant differences with asterisks (***) for certain conditions.]
