**Fig. S1:** Examples of ALCAM immunostaining in three cervical carcinomas showing concomitant cytoplasmic and membraneous ALCAM reactivity in tumor cells. A, squamous cell carcinoma with weak to moderate ALCAM expression (IRS 4; 400x). B, squamous cell carcinoma showing weak to strong ALCAM immunoreactivity (IRS 6; 400x). C, squamous cell carcinoma showing moderate to strong ALCAM expression (IRS 9) with cytoplasmic and membraneous staining in varying proportions (200x). Open arrow: mostly membraneous staining pattern; filled arrow: strong cytoplasmic staining.
