**Figure A**

Bar chart showing the thymosin β10 mRNA level (% of primary CCA) for paired CCA specimens from patients. The bars for primary CCA (white) and metastasis CCA (black) are compared.

**Figure B**

Images of primary CCA and metastasis CCA tissues.

**Figure C**

Bar chart illustrating the thymosin β10 mRNA level (normalized to β-actin) for CCA cell lines M055, M156, M213, M214, and K100.

**Figure D**

Images of cell lines M213, M214, and KKKU100 for visual comparison.
