Figure 2

**(A)**

Bar chart showing the number of colonies >100 μm per LPF for different cell lines: pLRT, V12, G37, S35, C40, and Rif-CAAX. Error bars indicate variability.

**(B)**

Microscope images of selected cell lines: pLRT, V12, G37, S35, C40, and Rif-CAAX. Scale bars indicate measurement.

**(C)**

Graphs showing the relative fluorescence units (RFU) over time in culture for DMSO vehicle and 0.25 μM PD153035. The graphs compare colonies from different cell lines: pLRT, V12, G37, S35, C40, and Rif-CAAX. Error bars indicate variability.
