Figure 8, Verjans et al., 2008

(a) Cumulative survival fraction against overall survival in months. The graph shows two lines: one for MIF protein IRS > 4 and another for MIF protein IRS ≤ 4. The p-value for Tarone-Ware test is 0.0019, with n = 174 and events = 59.

(b) Similar to (a), but for recurrence-free survival in months. The lines represent MIF protein IRS > 4 and MIF protein IRS ≤ 4. The p-value for Tarone-Ware test is 0.0327, with n = 165 and events = 70.
