Potentially relevant studies identified and screened for retrieval (n= 776).

Papers excluded on the basis of information from title and abstract (n= 737).

Full text copies sought for more detailed evaluation (n= 39).

10 excluded for measuring functional status rather than QOL.

9 excluded, as they were discussion papers, not outcome measures.

6 excluded as they did not include children with CP from 4-18 years.

2 excluded for assessing the effect of environment on QOL.

1 excluded, for comparing the QOL of children with CP with normative data.

3 excluded as they related to QOL measures that were not CP condition specific.

8 papers identified with usable information reporting on 5 measures.
