PILOT STUDY

- Selecting disease-specific situations (based on professionals, parents and literature)
- Filming these situations in 15 families (describing parent and child behaviors)
- Constructing new domains for parent and child
- Scoring 15 families with the OKI-DO observational tool
- Preliminary psychometric results

LARGE SCALE VALIDATION STUDY

- Filming and scoring diabetes-specific situations (that resulted from the pilot study) in 120 families
- Evaluating the psychometric performance of the OKI-DO observational tool
