Participants will be recruited via the research website (www.geton-training.de) that is announced in newspapers, on-air media and related websites.

People who applied for participation are asked to complete a screening questionnaire.

Exclusion criteria
- CES-D < 16
- suicidal risk (BDI item 9 > 1)
- currently in psychotherapy
- on a waiting list for psychotherapy
- psychotherapy in the past 6 months

Participants screened positive and willing to give informed consent are scheduled for a diagnostic interview by telephone (SCID/DSM-IV section for mood disorders) to assess whether they meet study inclusion criteria.

Exclusion criteria
- acute depressive episode, bipolar disorder or psychosis according to DSM-5 criteria
- history of MDD in the past 6 months

Participants who meet the study inclusion criteria and none of the exclusion criteria, signed the informed consent form, and who completed the baseline assessment (T0) are randomised.
