Original parent codes developed from initial analysis
- Pain
- Primary Prevention
- Secondary Prevention
- General prevention (non knee)
- General health
- Health care
- Rainbow model
- Risk factor recognition

Memo development
Making linkages between prevention nodes, health care use and rainbow model led to the core concept of responsibility.

Development of core concepts e.g. diagram below used to discuss responsibility

Refined nodes and ‘coding on’
E.g. consideration of barriers and facilitators to take responsibility, and these two new codes were added to the framework, and used for ‘coding on’ of the prevention nodes.
