Figure 1. Prevalence of lipid abnormalities before and after treatment with lipid modifying therapy in total population (n=5,424)

At Baseline

- Low HDL-C (35.3%, n=1,913)
- Elevated LDL-C (93.2%, n=5055)
- Elevated TG (61.1%, n=3313)
  - 1.7% (n=90)
  - 3.2% (n=155)
  - 31.4% (n=1,704)
  - 1.5% (n=103)

At Follow-up

- Low HDL-C (30.4%, n=1,651)
- Elevated LDL-C (61.2%, n=3,318)
- Elevated TG (47.5%, n=2,577)
  - 4.0% (n=218)
  - 8.6% (n=464)
  - 25.3% (n=1,374)
- No lipid disorder (17.8%, n=964)

HDL-C = High-Density Lipoprotein
LDL-C = Low-Density Lipoprotein
TG = Triglycerides
