Figure 3. Odds ratios and 95 % confidence intervals for various types of medical care consumption (doctor’s visits and in-hospital care) in 8-month-old children in Malmö, Sweden, by presence of one, two or three unfavorable parental lifestyle factors (maternal smoking during pregnancy, secondhand tobacco smoke during 0 - 4 weeks of age, and duration of exclusive breastfeeding < 4 months). The reference group comprised children who were not exposed to maternal smoking during pregnancy or secondhand tobacco smoke during 0 - 4 weeks of age, and who were exclusively breastfed ≥ 4 months.
